

- 1) Read the number of items ordered and stock available. Display whether the order can be fulfilled completely, partially, or not at all..

flowchart

- 1) Read the number of items ordered and stock available. Display whether the order can be fulfilled completely, partially, or not at all.

Flowchart:

pseudo code:

START

Output "Enter number of items ordered: "

Input ordered

Output "Enter stock available: "

Input stock

If stock >= ordered Then

 Output "Order can be fulfilled completely"

Else

 If stock > 0 Then

 Output "Order can be fulfilled partially"

 Else

 Output "Order cannot be fulfilled"

 End If

End If

END

- 2) Read a word and determine whether it is a palindrome using character comparison from both ends.

2) Read a word and determine whether it is a palindrome using character comparison from both ends.

Flowchart:

Pseudo code:

START

Output "Enter a word: "

Input word

left = 0

right = length of word - 1

palindrome = True

While left < right

 If word[left] != word[right] Then

 palindrome = False

 Break

 End If

left = left + 1

right = right - 1

End While

If palindrome = True Then

Output "Palindrome"

Else

Output "Not Palindrome"

End If

END

3) Create functions for ascending sort and descending sort. Use a menu to choose the required order, and relate this to alternative method behaviour.

Pseudo code:

START

Function ascending(array, n)

For i = 0 to n-2

For j = 0 to n-i-2

If array[j] > array[j+1] Then

Swap array[j] and array[j+1]

End If

End For

End For

End Function

Function descending(array, n)

```
For i = 0 to n-2
    For j = 0 to n-i-2
        If array[j] < array[j+1] Then
            Swap array[j] and array[j+1]
        End If
    End For
End For
End Function
```

Output "Enter number of elements: "

Input n

Declare array[n]

```
For i = 0 to n-1
```

```
    Input array[i]
```

```
End For
```

Output "1. Ascending"

Output "2. Descending"

Input choice

```
If choice = 1 Then
```

```
    Call ascending(array, n)
```

```
Else
```

```
    Call descending(array, n)
```

```
End If
```

Output sorted array

END
